Undergraduate degree program

B.S., Aeronautical Management Technology, Professional Flight concentration

Arizona's clear skies offer the best flying environment in the country. This program is for students who are seriously interested in becoming professional airline pilots. In the Professional Flight concentration, you will learn to fly in an academic environment with access to state-of-the-art simulators, including single engine, twin engine and a regional jet flight simulation training device.

Flight training is offered by a flight provider in aircraft with state-of-the-art avionics using tablets as electronic flight bags. And you may take advantage of pathway agreements for guaranteed interviews with regional airline companies.

Other facilities, like the high altitude simulation chamber, and the close proximity to the airport provide students with educational opportunities unique among collegiate aviation programs.
