B.S., Aeronautical Management Technology, Unmanned Aerial Systems concentration

An optional accelerated program offers high-achieving students an opportunity to earn both a bachelor’s and a master’s degree within five years.

This concentration provides an overview of unmanned aerial systems operations and provides detailed knowledge of specific systems, technology, data collection and sensor operations relevant to this rapidly growing field.

The FAA is currently developing plans to integrate UAVs into the U.S. National Airspace System — the busiest, most complex airspace in the world. This concentration will prepare students to operate small to mid-range platforms that can be used by emergency responders, forestry, agriculture, energy and oil, and other similar industries.

Students graduating from this program will find various employment opportunities as UAV pilots and sensor operators in the U.S. and abroad.
